

Portfolio Website Developer Document

Portfolio Website
Developer Document

I want my portfolio to be minimalist and resizeable from desktop to mobile. I want the navigation to be as intuitive as possible.The coding languages I will implement on my website are HTML,CSS,JS and SASS. My Portfolio Webpage will be a single scroll page including the sections such as About me, Projects and Contact. My inspiration for a portfolio website is : <https://annieszafranski.com/> and <https://www.andreasgaida.com/>

Navigation (ui)

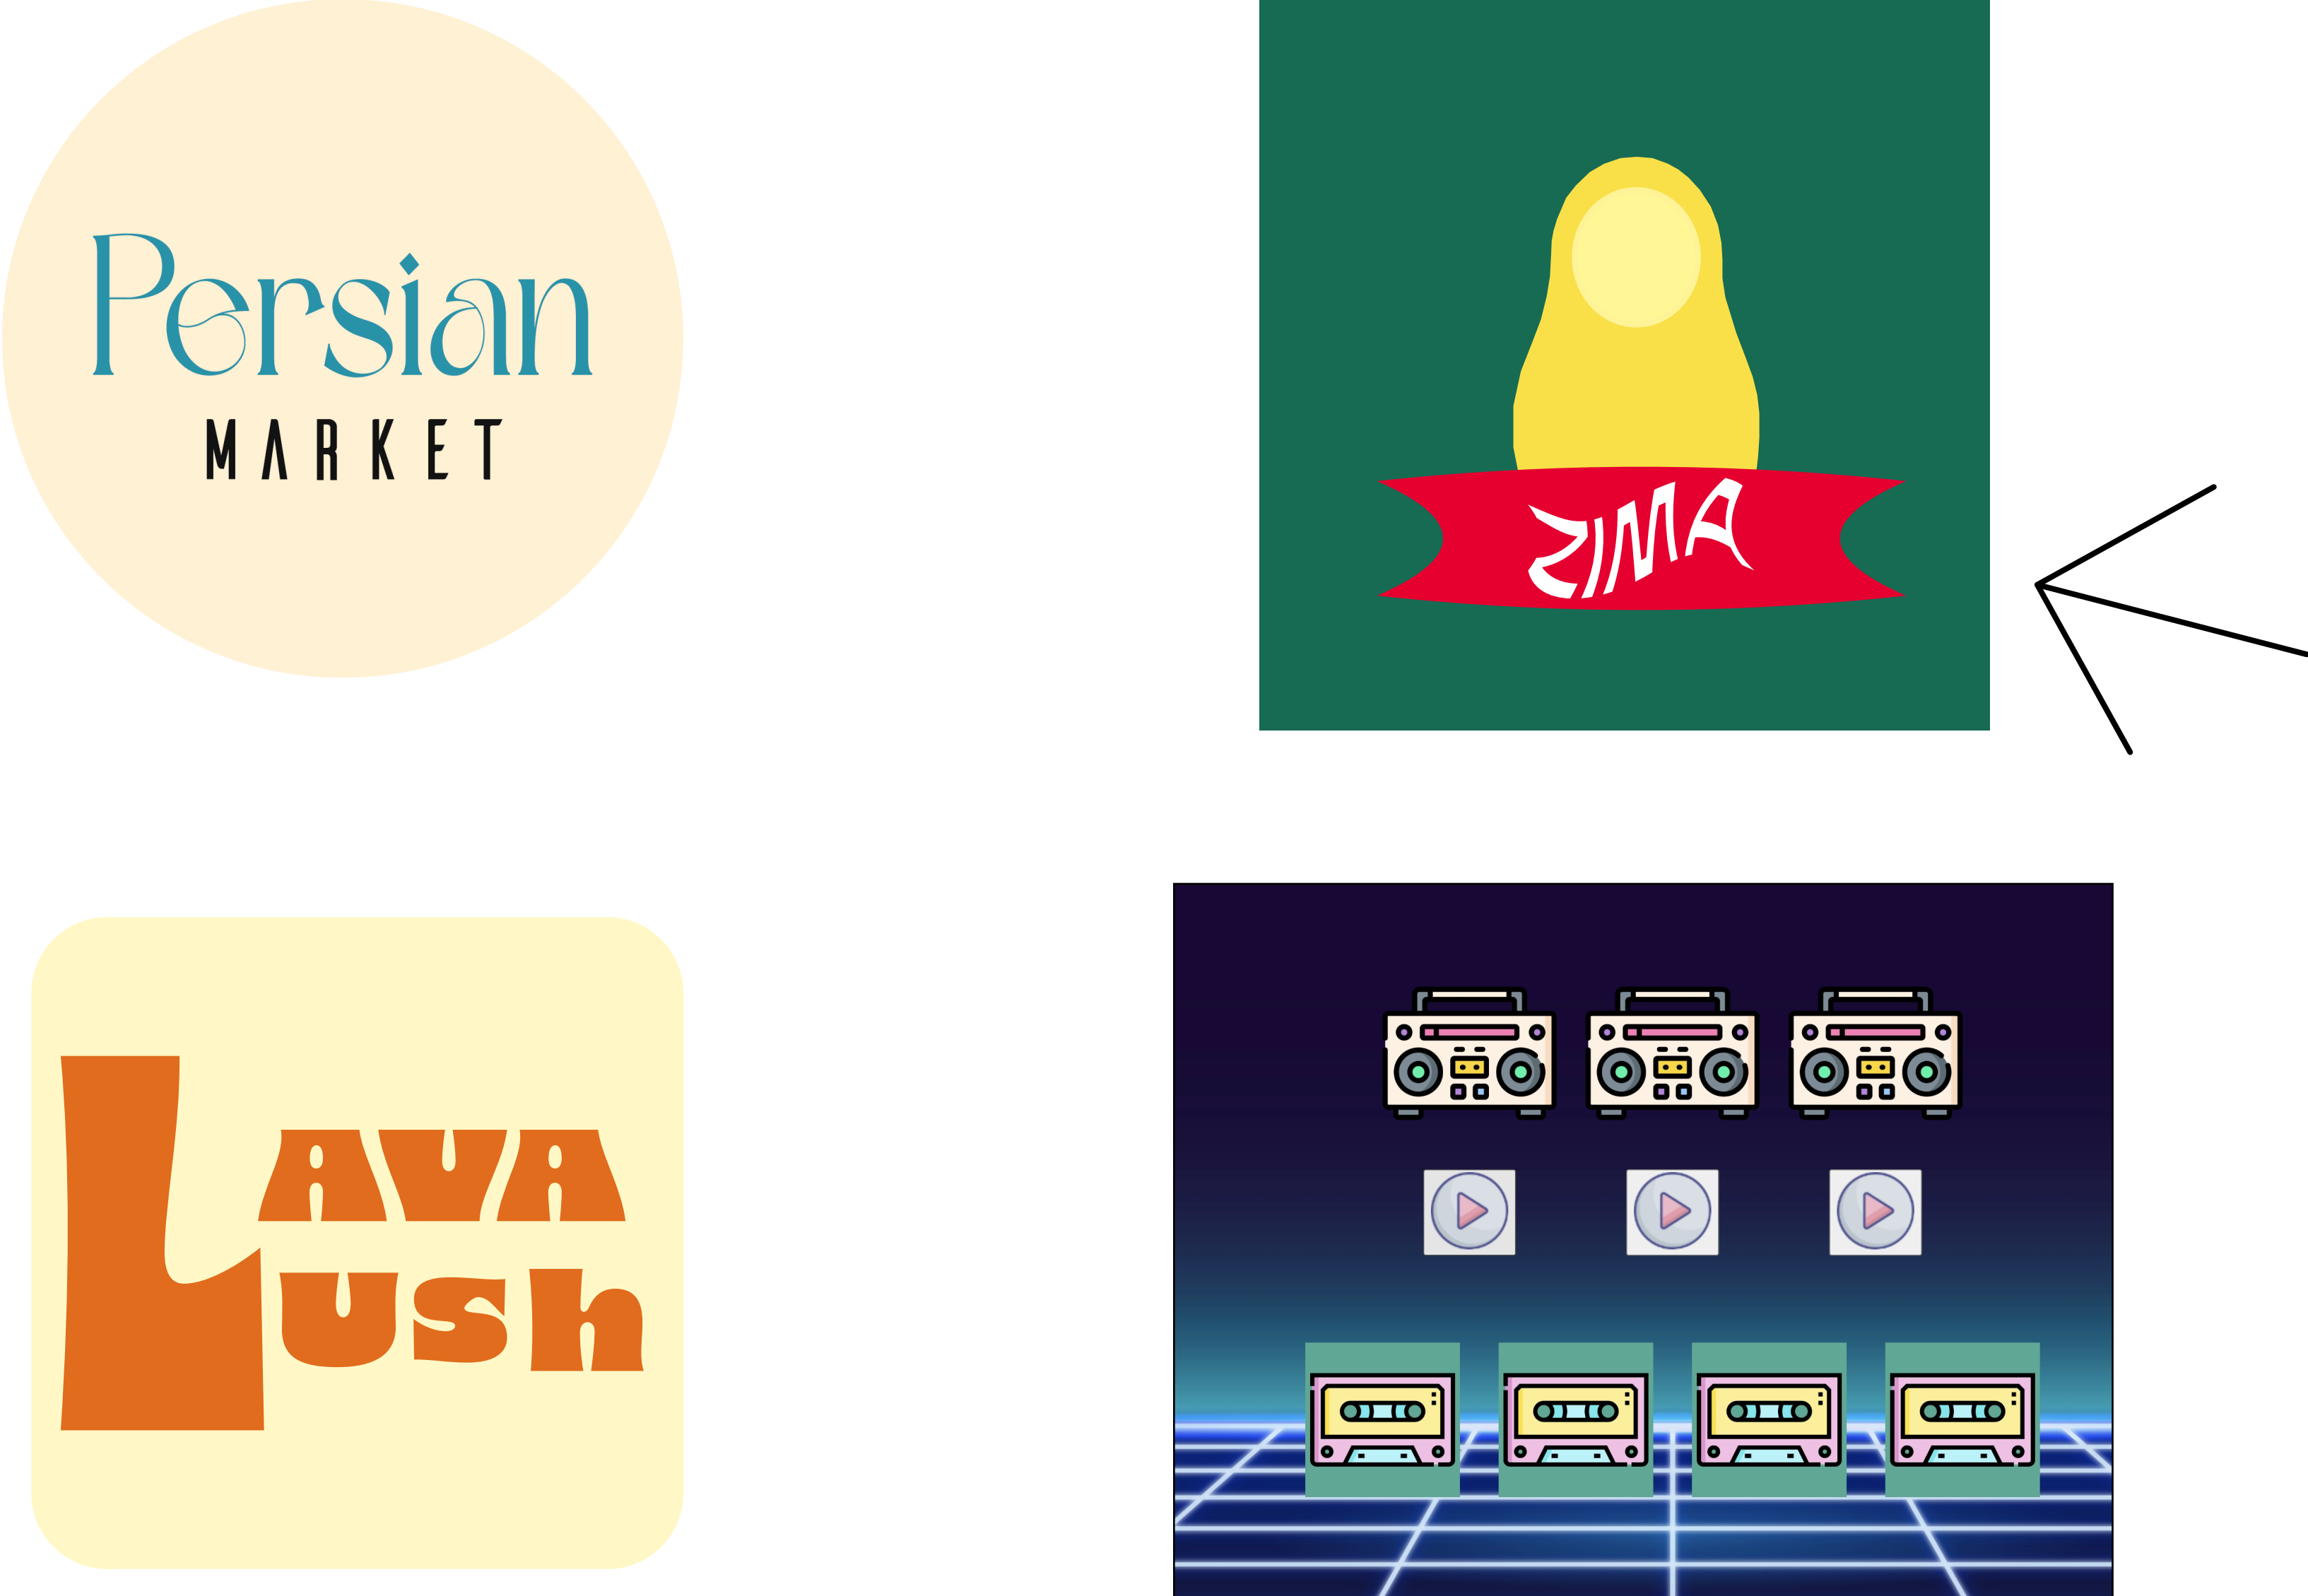

When entering the website, based on my research, the text on hero image will contain some Greensock animation that is ScrambleText. The hello & Bonjour will keep on changing.

Hello/Bonjour I’m Divij Saddul

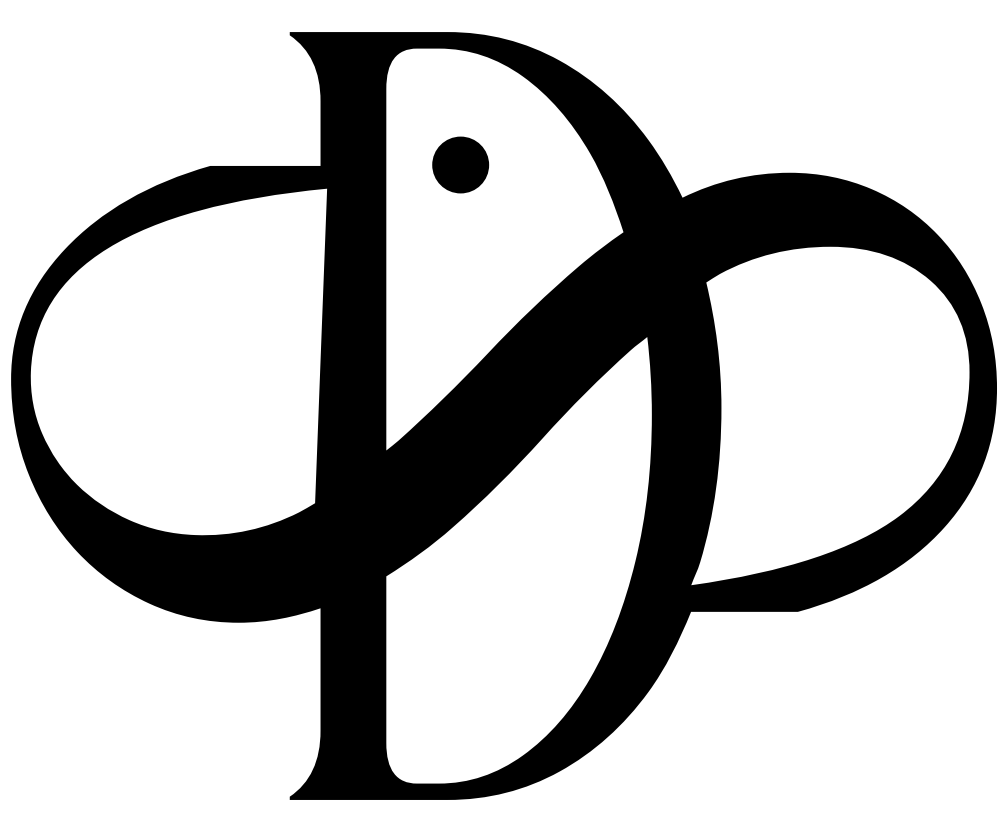

Projects

For project Section, it will have the hover functionality where when you click on it ,it will open a case study page to show how the project was done (software used)

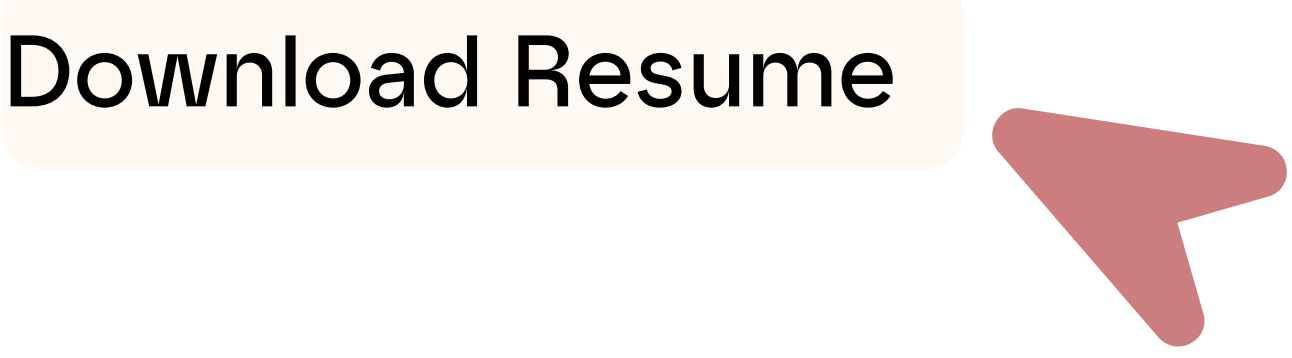

There is the possibility of implanting an animated logo when loading the website.

The website is resizeable in mobile version and there will be a hamburger menu and menu to help navigate through the website :

The website is resizeable in mobile version and there will be a hamburger menu and menu to help navigate through the website and a slide animation will be added

I added a download resume button for potential employers to see my skills set and experience on a pdf document . This button will relink them to a google drive or I will try to implement an instant download function
